Iskandar Gubaydullin

Senior Product Designer

Cybersecurity UX • Enterprise SaaS • DevSecOps • Investigation Systems

Astana, Kazakhstan, +7 705 565 4335, iskan153@gmail.com

LinkedIn: linkedin.com/in/iskan/

Portfolio: iskan.kz (last projects)

playground.wallarm.com/ (full-featured Wallarm test environment) designed ~80% of the platform's UX/UI: ~40% redesign and ~40% new features built from scratch.

iskan.tilda.ws/ (previous project until 2023)

Summary

Product designer with 10+ years designing data-intensive, safety-critical platforms for security engineers and technical operators.

I design systems that transform complex telemetry into actionable insights, enabling faster investigation, clearer decision-making, and reliable response in high-stakes environments.

Experience spans API security, threat detection and mitigation, DevSecOps workflows, investigation platforms, and enterprise SaaS.

Core strengths

- **Complex systems → clear workflows** (security/DevOps, BI, configuration UIs)
- **Usable Security** (signal-to-noise, safe defaults, transparent controls)
- **Data visualization & BI** (dashboards, chart builders, analytical UX)

- **Design systems** (tokens/components, accessibility, interaction patterns)
- **Discovery & research** (expert interviews, task analysis, metrics)

Tools: Figma, React (TypeScript), Tailwind, shadcn/ui, Recharts, API integrations, Supabase/Firebase (backend prototyping), Amplitude, GA/BigQuery, Miro, Notion, Jira/Confluence; AI-assisted prototyping of complex data-driven systems using ChatGPT, Claude, Gemini, Cursor, and Antigravity (interactive flows, API-integrated pilots, lightweight backend logic)

Experience

Wallarm – global API security platform protecting Fortune-500 companies from API attacks and vulnerabilities.

Product Designer (UX/UI) • Astana, KZ (remote)

Jan 2023 — Present

Shaping core product primitives and enterprise UX systems for API security, enabling DevSecOps teams to investigate, detect, and mitigate threats at scale.

Watch live product:
https://playground.wallarm.com/ (public sandbox)
A fully functional product environment with representative data, available without registration.

- **Defined and designed API Sessions and MCP Sessions (0→1)** — foundational abstractions that transform raw API traffic into structured behavioral models, changing how analysts reason about attacks.
- **Led design of Attack Surface Management (AASM) from scratch** — enabling continuous discovery, classification, and monitoring of external assets and exposure risks.
- **Established mitigation control UX systems** — designing configuration and enforcement models for API and AI security threats, including BOLA, SQLi, XSS, RCE, SSRF, and LLM/AI-related attack vectors; ensured tight alignment between detection logic and user-facing controls.

- Reframed investigation workflows into **structured, system-level experiences**, improving clarity of analysis and decision-making under complex telemetry.
- Delivered **30+ enterprise features and a full redesign** across API Security and Mitigation domains.
- Built a **data-first Business Intelligence Dashboard Builder** (no-code analytics system): multi-metric modeling, flexible axes, advanced filtering, and resilient states; reduced misconfiguration and accelerated time-to-insight.
- Designed **product activation and onboarding systems** with simulated attacks and safe defaults; improved comprehension and initial product adoption.
- Operated at the intersection of product, research, and engineering — **translating detection models into usable systems**; contributed to launches highlighted at RSA and Black Hat.

SberMarket – Russia's leading e-grocery platform with 10M+ users.
Product Designer (UX/UI) • Moscow, RU

May 2021 — Jan 2023

B2B seller tools for marketplace operations (analytics, catalog, fulfillment).

Designed and shipped **Retailer Management App** — internal web tool for managing partner stores, SKUs, and promotions. Delivered consistent layout logic and unified CRUD experience across modules.

Built **Retailer Information System** — central dashboard combining store metrics, catalog data, and operational status. Improved visibility for partner management and vendor operations teams.

Reduced user errors via safe defaults and consistent patterns; clarified high-volume operational flows and dashboards.

Group-IB – international cybersecurity firm specializing in threat intelligence and digital forensics. One of the world's top threat intelligence firms (≈600 specialists, global SOC network).
Product Designer (UX/UI) • Moscow, RU

Aug 2019 — Apr 2021

Threat-intel & SOC tooling for analysts and incident responders.

Shipped **TI/TH dashboards** (IOCs, campaigns, entities, links); improved correlation and hypothesis-testing in investigations.

Report & case redesign: moved from static docs to structured evidence views and reusable blocks; **cut reporting/hand-off from hours to minutes**.

Introduced investigation workbench patterns (entity pivoting, timeline filters, saved views) with research-driven UX alongside DFIR teams.

ExactFarming – agritech SaaS used by 1 000+ farms across CIS for IoT-based analytics.
Product Designer (UX/UI) • Moscow, RU

Sep 2016 — Aug 2019

Agritech SaaS: maps, IoT telemetry, field KPIs, and reporting.

Designed geospatial analytics, sensor overlays, and seasonal dashboards; unified data layers and alerts for agronomists.

MONT – major IT distribution group providing software and cloud licensing solutions across Russia and CIS.
Director of UX/UI & Visual Design • Moscow, RU

May 2013 — Apr 2016

Built the design function (web, brand, product touchpoints); introduced componentized UI, asset pipelines, and brand guidelines.

Sportplus – nationwide sports retail chain in Morocco, later acquired by Adidas Morocco.
UX/UI Designer • Casablanca

Jun 2012 — Aug 2012

Designed and led the development of the Sportplus e-commerce platform — the brand's first online retail system. Created the full purchase ux flows, product catalog flows, and marketing visuals for digital and in-store campaigns.

BezNebes • **Web Designer** • Ufa

Mar 2011 — Mar 2012

Visual/print, web, and brand design across multiple clients.

Fine Motion • **Graphic Designer** • Ufa

Jan 2008 — May 2012

Visual/print, web, and brand design across multiple clients.

Additional activities

KazHackStan – the largest annual cybersecurity conference in Central Asia, bringing experts from industry, government, and research.
Speaker • Almaty, KZ

Sep 2025

Conference talk: **"Usable Security — The UX Iceberg of Cybersecurity"**

Shared how UX decisions can strengthen or weaken security — from API protection interfaces to a real banking app vulnerability case.

Discussed how privacy by default, transparency, and human-centered design principles bridge the gap between developers, designers, and security engineers.

Independent design consultant

Jan 2023 — present

Worked on selected UX/UI projects in fintech and cybersec edtech.

Inversa — Investigation Acceleration Engine (founder-led initiative, in collaboration with Kazakhstan cybercrime investigators).

Designed and built a pilot investigation support system for blockchain fraud cases in collaboration with senior cybercrime investigators of the Republic of Kazakhstan.

- Modeled real investigative workflows, evidentiary structures, and institutional constraints based on direct collaboration with cybercrime officers.
- Architected and implemented a working pilot (frontend + backend) integrating real blockchain log APIs for transaction tracing and custody-chain analysis.
- Designed transaction graph visualization, structured evidence packaging, and freeze-window prioritization logic to reduce cross-border preservation latency.
- Developed a structured case-builder replacing manual reconstruction workflows used in financial crime investigations.
- Leveraged AI-assisted development workflows to accelerate system prototyping and data processing logic implementation.
- Produced detailed product and technical specifications to support future engineering scaling and institutional deployment.

AlfaBit Pay — payment and crypto-exchange interface for B2C clients.
StartX Edu — learning platform for training dev. teams in secure software practices.

- Emphasis on design systems, advised teams on UX strategy
- Improved onboarding scenarios, conducted audits and redesigns to simplify user journeys and align with secure design principles

---

Education

- **Higher School of Economics (HSE)** — E-business & Internet Project Management (2015–2016)
- **SFGA** — B.A., Graphic Design (2008–2013)

- **Bashkir State University** — M.A., Advertising (2006–2011)

Languages

- Russian — Native/Bilingual
- English — Professional working proficiency

Core Impact & Expertise

- **Cognitive UX Architecture** — design approach grounded in cognitive psychology and human–computer interaction principles, focusing on perception, attention, and user engagement in complex digital systems.

- **Data-Driven Visualization Systems** — created BI dashboards and chart builders with error-prevention logic, auto-metrics, and adaptive visual semantics inspired by Intercom, Amplitude, and Causal UX.

- **Complex Systems Simplification** — transformed multi-layered architectures (SOC, Threat Intel, Retail Ops) into intuitive, consistent user flows without sacrificing analytical depth.

- **Cross-Functional Design Leadership** — bridged design, engineering, and research through cognitive models, ensuring UX logic matched system logic.

- **Framework Thinking** — developed methods like **Cognitive Load Mapping**, **Adaptive Task Flow Model**, and **Safe Default Patterns** applied in cybersecurity and SaaS ecosystems.
